

1 · The experiment — measure it!

Reaction Time (one round): my time _____ ms

Run **MATB** — practice dry run, then the Condition Lab comparison. Write your final scores.

Run	Final score
Practice (dry run)	
① Baseline (quiet)	
② Stressed (cabin noise)	

My change: the noise made my score ↓ **down** / ↑ **up** by about _____ %.

Learning effect: like a new sport — you improve, then plateau. Sleep & mood still matter.

Why did the noise change performance?

2 · Design your module (Blueprint)

- ☐ Kept at least 1 life-support unit
- ☐ Added at least 2 stowage units
- ☐ Added sleeping quarters
- ☐ Every module has a clear path to the entrance
- ☐ Mission Success ≥ 70 → **My score:** _____

3 · Sketch your blueprint

Label at least **3** features that protect the crew's mind (acoustic zone, plants, virtual window, quiet sleep area) and the **entrance + corridors**.

draw here...

Our pitch (2 sentences): "We added _____ to protect _____, and our Mission Success was _____."

Exit ticket — two sticky notes (write your **name** on each):

- ① One thing in the architectural environment that **helps** cognition: _____
- ② One thing that **hurts** it: _____
