

Teacher Notes — The Architect's Mind in Orbit

~90–120 min · ages 12–18 · phones + projector + whiteboard · one QR at a time · Full plan: [workshop-en.md](#)

Before the session

- Slides from [slides-outline.md](#); whiteboard markers; cabin noise on speakers.
- QR PDF — show **one code at a time** on projector ([qr-en.pdf](#)).
- Handouts A3 ([handout-en.pdf](#)); **2 sticky notes per student** (name on each).
- Teacher laptop ready to mirror a student's Blueprint. Presets on hub: [/comms](#) [/monitoring](#) [/tracking](#) [/resource](#).

Run sheet

Block	You do	Students do
A · Present ~35–45 m	Intro speaker · slide 1 · station history (Salyut→Tiangong) · messy machine-centric design · locale slide (ESA/ISS) · Wandt/Columbus photo · "What makes space stressful?" · whiteboard : space → school → home → relax · cognitive link slide · current vs. Guidice future · small steps · 3 tests + MDRS/ISS · age guide (RT/MATB/N-Back)	Discuss; contribute to board (stays up all class).
B · Experiment ~35–45 m	QR: RT only — gather spread, confounders, normalization. Projector : MATB all tasks → each Preset → 2-min mode. Then QR: MATB dry run + walkthrough. QR: Condition Lab — quiet vs. noise. Whiteboard: learning curve, plateau, athlete analogy. Real science = repeat until stable.	RT one round · MATB practice · Condition Lab · fill handout §1 .
C · Design ~20–30 m	QR: Simulator — quantify links. QR: Blueprint — brief + trade-offs; repeat  corridor rule. Mirror high scorer on laptop. Optional : Model Lab (cut if long) · A3 group sketch.	Simulator → Blueprint (Mission Success ≥ 70) · handout §2–3.
D · Exit ~5 m	Collect two post-its per student. Closing slide : Space for everyone · Architecture = people · Design = trade-offs · You = future of exploration. Thanks + links.	Post-it 1: helps cognition · Post-it 2: hurts cognition (name on each).

Key messages

- Today's ISS is still messy, loud, cramped — design must improve with evidence.
- Scientists measure, compare conditions, account for learning & confounders.
- Blueprint trade-offs: crew mind vs. mission science/engineering.

Closing slide (after exit ticket)

- Space is for everyone.**
- Architecture is about people.**
- Design is a series of trade-offs.**
- You are the future of space exploration.**

Pilot learnings [60 · 3×20](#)

- Phones mostly OK — try **Chrome** if Safari glitches.
- MATB: demo on projector first; pair if needed; mixed scores normal.
- Blueprint addictive — repeat entrance corridor rule. See [workshop-feedback.md](#).

Troubleshooting

- Running long?** Cut Model Lab → A3 sketch → shorten history.
- Too many QRs?** One on screen at a time only.
- No sound?** Condition Lab noise per phone.
- Wrong language?** [?lng=sv](#) or [?lng=el](#)
