

1 · The experiment — measure it!

Run the MATB test twice and write your final score.

Condition	Final score
① Baseline (quiet)	
② Stressed (cabin noise)	

My change: the noise made my score ↓ **down** / ↑ **up** by about _____ %.

Our square's average drop: _____ %.

Why did the noise change performance?

2 · Design your module (Blueprint)

- ☐ Kept at least 1 life-support unit
- ☐ Added at least 2 stowage units
- ☐ Added sleeping quarters
- ☐ Every module has a clear path to the entrance
- ☐ Mission Success ≥ 70 → **My score:** _____

3 · Sketch your blueprint

Label at least **3** features that protect the crew's mind (acoustic zone, plants, virtual window, quiet sleep area) and the **entrance + corridors**.

draw here...

Our pitch (2 sentences): "We added _____ to protect _____, and our Mission Success was _____."

Exit ticket — one feature that **helps** cognition: _____ · one that **hurts** it: _____
